NOTE: This is a 'working draft' sequence. It currently consists of 69 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

More than 870,477 bases have been sequenced by the genomic walking technique and assembled into 372 non-overlapping contigs (Accession numbers 233005 to 23336) covering 214,528 base pairs. The length of the contigs varies from 63 base pairs to 2049 base pairs with an average length of 58 base pairs. The length of the contigs varies from 63 base pairs to 2049 base pairs with an average length of 58 base pairs. The length of the contigs varies from 63 base pairs to 2049 base pairs with an average length of 58 base pairs. The length of the contigs varies from 64 base pairs and 204,437 bases (94%) produced by genomic walking. Of the latter 155,805 bases (77%) have multiple covered on both strands. There is a total of 968 ambiguous nucleotide assignments in the data set (65%) are covered on both strands. There is a total of 968 ambiguous rucleotide assignments in the data set (65%) are compared 8,868 bases of our data with Mycoplasma capricolum sequences already stored in the public databases and note less than 0.7% difference between the two data sets (77%) including ambiguous calls, insertions, deletions and mismatches).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2 (bases 1 to 363)

                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This record contains 87 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. Will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * 13890 13889; contig of 756 bp in length

* consists of 8 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 18478 18577: contig of 18477 bp in length
* 18578 20885: contig of 2308 bp in length
* 20886 20985: gap of unknown length
* 20886 20985: gap of unknown length

Runduery@aanger.ac.uk Clone requests: clonerequest@anger.ac.uk

Our Nov 16, 2001 this sequence version replaced gi:15131273.

During sequence assembly data is compered from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >-

10); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw; SWISSERF; T:. TREMBL; We: WoRNPEP! Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Porojects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group Further information can be found at

REIL-/www.sanger.ac.uk/Porojects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group Further information can be found at

REIL-/www.sanger.ac.uk/Porojects/Celegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1 of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IMPORTANT: This sequence is not the entire insert of clone strings be shorter because we sequence overlapping sections only once, except for a short overlap.
The true right end of clone RPI1-91KII is at 126371 in this sequence. The true left end of clone RPI1-460G22 is at 31870 in this sequence. The true left end of clone RPI1-460G22 is at 31870 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Assembly program: XGAP4; version 4.5
Sequencing vector: plasmid; L08722; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Consensus quality: 141371 bases at least Q40
Consensus quality: 151757 bases at least Q20
Insert size: 154715; sum-of-contigs
Insert size: 174718; sum-of-contigs
Coulty coverage: 3.16x in Q20 bases; sum-of-contigs Quality
Coverage: 3.01x in Q20 bases; agarose-fp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Direct Submission

Submitted (15-FEB-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 15s, (15-FEB-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 15s, (15-FEB-2000) Sanger ac.uk

requests: clonerequest@sanger.ac.uk

On Feb 7, 2000 this sequence version replaced gi:678223.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the ortsponding to the overlapping clone, as we submit sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6 constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at thip://www.sanger.ac.uk/HGP/Chr6 RPI-39M18 is from the library RPC1-1 constructed at the Roswell Park Canner Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em.; EMBL; Sw.; SWISSPOTY; Tr.; TREMBL; WP:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                               ALI36130 69674 bp DNA linear PRI 02-MAR-2000 thuman DNA sequence from Clone RPI-39M18 on chromosome 6q26-27. Contains part of the PDB10A gene for phosphodiesterase 10A, ESTS, STS, and GSSs, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IMPORANT: This sequence is not the entire insert of clone RP1-38MH8 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone RP1-39MH8 is at 1 in this sequence. The true left end of clone RP1-39MH8 is at 69575 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FEATURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 50 configs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                   Direct Submission

It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100 bp

NOTE: This is a 'working draft' sequence. It currently consists of 27 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Des Preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 39, Application US/09746491
Patent No. US20020137202A1

GENERAL INFORMATION:
APPLICANT: Burgess, Catherine E.
TITLE OF INVENTION: No. US20020137202A1e1 Proteins and Nucleic Acids Encoding Same
FILE REFERENCE: 15966-621
CURRENT APPLICATION NUMBER: US/09/746,491
CURRENT FILING DATE: 2000-12-20
PRIOR APPLICATION NUMBER: USSN 60/171,329
PRIOR APPLICATION NUMBER: USSN 60/171,329
PRIOR FILING DATE: 1999-12-21
NUMBER OF SEQ ID NOS: 72
SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 39
